

Company	Maschinenfabrik Reinhausen GmbH (Regensburg, Bavaria)
HQ	Regensburg, Bavaria
Revenue	€1.2 billion (Scheubeck Holding, 6th generation family-owned)
Employees	~5,400 worldwide; 60 locations in 28 countries
Axians relationship	No known Axians relationship — cold account

Why This Account. Why Now.

- Won the first German Industrie 4.0 Award — connected factory is real and documented
- Products regulate 50% of global electricity — NIS2 essential entity + KRITIS supply chain pressure from utility customers
- ISO 27001 ISMS under construction, scoped to ETOS product only — group-wide segmentation gap exists
- Three-digit million Euro investment offensive: doubling Regensburg Haslbach site — greenfield segmentation opportunity
- ProductCERT publishes vulnerability advisories recommending customers use network segmentation — does MR's own production network match that standard?

The Narrative

Reinhausen's MR-CERT publishes advisories that explicitly tell utility operators: 'Use mechanisms for vertical and horizontal network segmentation at all transition points.' The outreach narrative: *Your customers' auditors are going to ask whether their OLTC supplier holds their own production network to the same standard you recommend to them.* With the Haslbach expansion underway, the greenfield segmentation window is now.

Primary Contact

Name	Dr. Hubert Feyrer
Title	Cyber Security Expert, Maschinenfabrik Reinhausen GmbH

The Ask

Cold LinkedIn connection (Dr. Hubert Feyrer) with a NIS2 + BDEW Whitepaper angle. Reference their own published advisory language. Ask: 'Would a 30-day production network discovery, with your team retaining full control, be useful as an input to the ISO 27001 ISMS build you are currently undertaking for ETOS?'
