

Showcase Account: Trumpf GmbH + Co. KG

This brief demonstrates the ABSM methodology applied to a high-profile, recognizable German manufacturer — above the standard ICP band but included for portfolio credibility.

Company	TRUMPF GmbH + Co. KG, Ditzingen (near Stuttgart), Baden-Württemberg
Revenue FY2024/25	€4.3 billion (down 16% — belt-tightening year)
Employees	18,303 worldwide; 9,337 in Germany
Market position	World leader in machine tools + industrial lasers; sole EUV laser supplier to ASML
ISO 27001	Certified December 2023 — all core TRUMPF entities
CIO	Thomas Speck (since 2021); 190 IT staff; CIO of Year 'Transformation of Work Award' 2023
Axians status	No known relationship — cold account; BW geographic proximity

Why Trumpf, Despite Being Above the ICP Band

Trumpf's production network complexity exceeds that of every other account in this sprint. 30 machines connected via OPC UA in the Ditzingen smart factory. SAP S/4HANA migration underway. EUV production (sole supplier to ASML) is the most KRITIS-adjacent manufacturing environment in Germany. ISO 27001 certification mandates segmentation controls that the production network architecture must now satisfy.

The Three Pain Patterns

- ISO 27001 Annex A 8.22 — documented network segmentation control — directly requires what Guardicore delivers
- SAP S/4HANA migration in flight — highest lateral movement risk in the company's digital transformation
- EUV supply chain criticality — ASML and semiconductor customers will audit Trumpf's production security

The Narrative

Thomas Speck won CIO of the Year for transforming Trumpf's IT systematically. The transformation created a cloud-first, IIoT-connected, SAP-migrating infrastructure. The next chapter is securing what the transformation connected — specifically the production floor, where 30 OPC UA machines communicate freely in an architecture that predates modern microsegmentation policy tools.

The Ask

Request through Axians BW regional team: a 60-minute executive briefing with Thomas Speck on 'NIS2 segmentation requirements for connected manufacturing — peer benchmark from the BW Mittelstand.' Frame as information sharing, not vendor pitch. Guardicore emerges in the second meeting.
