

Partner Intelligence Program (PIP) — Axians IT Security Brief

The Partner Intelligence Program is a strategic initiative proposed by Akamai to systematically route high-intent DACH accounts to Axians IT Security Services, pre-loaded with account intelligence and ready-to-use sales kits. This brief explains the program mechanics and Axians' role.

The Problem This Solves

Without the PIP, Axians IT Security finds accounts through: (a) cold outreach, (b) industry events, (c) occasional internal referral from other Axians portfolio teams. This produces a fragmented, effort-intensive pipeline with long sales cycles. Warm-path accounts — like Hörmann, where Axians NEO has an 11-year relationship — are never routed to IT Security because there is no systematic cross-portfolio mechanism.

How the PIP Works

Layer 1	Intent Routing Akamai uses 6sense intent signals + 1st-party telemetry to identify DACH manufacturers showing in-market signals for OT security, NIS2 compliance, and microsegmentation. Monthly curated 'Hot 20 DACH Accounts' list delivered to Axians via HubSpot.
Layer 2	Account Intelligence For each account, a pre-built intel kit is delivered: company brief, pain map, relationship map, Axians connection analysis, and outreach sequence. Axians AE receives a ready-to-use dossier, not raw data.
Layer 3	Content Arsenal Account-specific PDF briefings (like the 11 other files in this package) are attached to each HubSpot deal record. AE knows which asset to send, to which contact, at which stage of the buying journey.
Layer 4	Cross-Portfolio Routing When the intent-routed account is already an Axians customer in another portfolio (SAP, network, cloud), a cross-portfolio referral mechanism routes the Guardicore opportunity to IT Security with the existing AE's warm introduction.

Metrics — What the PIP Targets in Year 1

20 accounts/month	Monthly 'Hot 20' list delivered to Axians
5 qualified opportunities	Target from 20 accounts per month
2 POC closures/quarter	30-day proof-of-value engagements
1 deal closure/quarter	Full deployment win from POC pipeline
€150K–€400K ARR/deal	Typical German Mittelstand Guardicore deployment

Hörmann as the PIP Proof of Concept

The ABSM Sprint deliverables in this package constitute a working demonstration of the PIP at full capability: 4 accounts researched, 16 intel files produced, 4 strategy documents, and 12 execution PDFs — all without CRM access or internal Axians data. A live PIP with Akamai 6sense signals and Axians HubSpot access would be more targeted, faster, and richer. Hörmann is the proof-of-concept account: existing relationship + Guardicore gap = the model deal the PIP was designed to close.
