

TISAX 6.0 and Network Segmentation — What Tier 1 Suppliers Need to Show

TISAX (Trusted Information Security Assessment Exchange) is the automotive industry's standard for supplier information security. Version 6.0 (published May 2024) significantly raised the bar for network architecture requirements — specifically for suppliers handling prototype data or production technology (Assessment Levels 2 and 3).

What TISAX 6.0 Requires for Network Segmentation

Control	Topic	What TISAX auditors check
IS-07	Network segmentation	Production networks must be separated from corporate IT. VLANs alone are insufficient without o
IS-08	Remote access control	Remote maintenance access must traverse a documented, segmented boundary. All sessions lo
IS-11	Supplier/partner access	Third-party access to systems (ERP, CAD, test environments) must be bounded and auditable.
IS-19	IT/OT boundary	For manufacturers with production systems: documented segmentation between office IT and sh
IS-22	Asset inventory	All network-connected assets inventoried with security classification. Dynamic discovery preferre

The Witte Automotive Scenario

A Tier 1 automotive supplier with mechatronic locking systems for VW, BMW, and Mercedes faces simultaneous TISAX audits from multiple OEMs. Each OEM's audit questionnaire (since Q4 2024) includes a mandatory section on: *IS your production network documented and separated from corporate IT?*

- VW: 'Provide evidence of network segmentation between corporate and production environments'
- BMW: 'Document all production-adjacent system connections and access controls'
- Mercedes: 'Show network architecture with segmentation policy in effect'

How Guardicore Generates TISAX Evidence

Phase	Step	TISAX output
Week 1–2	Discovery	Guardicore maps every workload, connection, and flow in the production network. No enforcement, no
Week 3	Visualization	Complete network map with process-level labels. Your team sees the network as it actually is.
Week 4–5	Policy generation	AI-assisted policy draft: what should be allowed, what blocked. Your team reviews and approves.
Week 6+	Enforcement	Policy enforced. Traffic logs begin. Audit-ready documentation generated.
Ongoing	Evidence export	TISAX evidence package exportable: network map PDF + policy document + traffic log summary.
